

ITM 301 – Security Malware Lab = 100 Points -- As usual, do not restate the questions.

Install the OVA File provided on BlackBoard & Setting up the Virtual Box VM:

- Open up Virtual Box
- Select Import Appliance
- Click on Open Appliance
- Select the windowsxp_lab.ofv file
- Click next and then import
- Start the VM within Virtual Box

After the Virtual Machine is running, observe that it has a number of spyware/malware related items loaded and running on it.

- Be sure to open all of your internet browsers (notice the tool bars?)
- You might notice the machine runs slow even for having 4GB of RAM

Within the Tools folder is a list of programs to clean the machine. Run/install the programs in the following order. It is critical you run them in the order below. Please be sure to take screen shots of each step (Reason is, you will be completing this at home). After you install and run each program, does it do anything? Nothing? The program do anything strange or weird? Take notes as you will have to write a report for me. Additionally, each step should produce a log file. The log files will need to be turned in.

Please attach those as files in BlackBoard. NOT in your document!

- Combo Fix (take all the defaults)
- Super Anti Spyware (run the default clean)
- Malware Bytes (defaults)
- Rootkit Buster
- Hijack This (cleaning out the browsers)
- Ccleaner (for cleaning out the orphaned registry entries)

Expected deliverables:

Upon, running each program as directed please type up a final report document, to be submitted as a document (MS Word .DOC or .DOCX, Open Office .ODT, Libre Office .ODT, Adobe .PDF). The document should include:

- A screen shot of the beginning and end of each tool you install. (2 slides)
- Any other screenshots you consider important
- A screen shot of the task manager process window before and after cleaning.
- All log files as produced by the utility or in txt files.
- In your summary,
 - describe what you observed, what you did, anything strange you encountered and how you dealt with it.
 - o How do you know the machine is clean?
 - o Anything else you want to share with me.
